

Justin Cordova

Stewartsville, NJ | 908-386-6161 | justinavodroc@gmail.com | justincordova.dev | linkedin.com/in/justinalolorcordova

EDUCATION

New Jersey Institute of Technology

Newark, NJ

Bachelor of Science in Computer Science

December 2026

- Relevant Coursework: Software Engineering & Design, Advanced Data Structures & Algorithms, Operating Systems, Computer Systems, Computer Networks, Database System Design & Management, Cybersecurity, Programming Language Concepts, Advanced Web Applications
- Awards: Highlander Achievement Scholarship, Dean's Scholar

EXPERIENCE

Software Developer Intern

Aug 2025 – Present

Pure Technology Inc.

Remote

- Engineered a **POS database cleanup utility** in **C#/.NET 8** for Retail Management Hero (RMH), processing **1M+ records/hour** with **100% transactional integrity**, reducing legacy data bloat by **40%**, improving query performance by **25%**, and providing a **scriptable CLI** that cut manual maintenance time by **50%**.
- Developed **2 RMH POS extensions** using **MEF plugins** and **WPF/Telerik UI** that surface open work orders and layaways on customer lookup, enabling cashiers to recall orders and apply custom statuses, streamlining workflow and reducing average order processing time by approximately **30%**.
- Built a **background polling service** that monitors a **custom SQL notification queue** every 60 seconds, resolves customer contact data via database joins, renders templated messages with token substitution, and delivers alerts via pluggable providers with exponential backoff retries (5/15/60 min) and named-pipe IPC for remote administration.

Full-Stack Developer Intern

July 2025 – Aug 2025

AbeScott Enterprises

Remote

- Architected a **mobile app** integrating **3 ride-sharing APIs** (Uber, Lyft, DoorDash) with a unified React interface, enabling real-time price comparison and service selection across multiple platforms.
- Designed a **RESTful API** backend using **Node.js** and **Express** with **Supabase authentication**, achieving **sub-200ms** average response time across all endpoints.
- Led a development team of **10 engineers** across frontend, backend, and API integration workstreams, delegating tasks and conducting bi-weekly sprint planning to coordinate feature deliveries.

PROJECTS

ArcadeAI | *TypeScript, React, Fastify, SQLite, Drizzle ORM, Bun, Tailwind CSS*

May 2026

- Built a **prompt-to-playable-game** platform that streams complete HTML5 Canvas games via **SSE** from LLM generation, with an auto-repair loop that catches runtime errors and feeds them back to the model for targeted fixes.
- Implemented a **RAG pipeline** using **sqlite-vec** for vector similarity search over a curated reference library, with genre-filtered cosine retrieval and a minimum similarity threshold to prevent irrelevant few-shot injection.
- Designed a **multi-model AI orchestration** layer routing Claude Sonnet for generation and GPT-4.1-mini for classification/summarization, with **parallel fanout** for concurrent embedding, classification, and title generation using **Promise.allSettled** with graceful fallbacks.

Rumi | *TypeScript, React, Fastify, Yjs, Hocuspocus, PostgreSQL, Supabase, Drizzle ORM, Bun*

May 2026

- Built a **real-time collaborative workspace** using **CRDT-based sync** via Yjs and Hocuspocus, achieving **sub-200ms** remote edit propagation with zero merge conflicts across code editing, markdown preview, and infinite-canvas drawing.
- Designed a three-tier role system with whitelist/blacklist access control, **Stripe billing** with idempotent webhooks, and plan-gated limits enforced server-side at both HTTP and WebSocket layers.
- Implemented a shared protocol package with Zod schemas for **type-safe client-server communication**, and soft-delete with trash and 30-day auto-purge for room lifecycle management.

Seshr | *Go, Bubbletea, Lipgloss, Cobra, SQLite*

April 2026

- Built a **terminal UI** for browsing, replaying, and pruning AI agent sessions across Claude Code and OpenCode, with **live process detection** and **incremental loading**.
- Designed a **pluggable backend architecture** supporting multiple agent platforms with zero TUI changes, using file locking and SQLite transactions for safe session editing.

TECHNICAL SKILLS

Languages & Databases: C#, JavaScript/TypeScript, Go, Python, C, MySQL, PostgreSQL, MongoDB, SQLite

Frameworks & Libraries: .NET, EF Core, NHibernate, NUnit, WinForms, React, React Native, Expo, Node.js, Express, Next.js, Fastify, Drizzle ORM, Jest, Django, Tailwind CSS, Prisma, Zustand, Redux, Cobra, Viper, Yjs, TanStack Router

Developer Tools: Git, Postman, Jupyter Notebook, Docker, Bun, Biome

Concepts: RESTful APIs, Microservices, CI/CD, Agile/Scrum, OOP, Design Patterns, System Design, Test-Driven Development, RAG, Vector Databases, AI Orchestration
